Stan Ward says: I am happy to announce the expansion of the LT series of sight adjusters to include two new models which will fit certain Mauser rifle models. Requests from you, my customers, indicated the need for these and development has been ongoing for some months. Listed below are the three models we now manufacture and the rifle models which they fit. Additionally, in the next month there will be one more model which at this time is listed below but not yet in production.

This model will fit the Yugo M48. Although not in production right now I will accept pre-orders for the M48 model. The pre-order must be accompanied by remittance. These sight adjusters are precision made from quality steel. They are hot dip blued and are guaranteed for life. The LT sight adjusters enable you to obtain maximum accuracy from your rifle due to the preciseness of the adjustments. Cost of any model of LT adjuster

remains at \$18 plus \$2 shipping. Sets of two or more are shipped free. You may remit by money order or check direct from me using my email address below or if you wish to order using a credit card please use this link. <http://www.gun-shop.biz/>

Any comments or questions are most appreciated. Thank you all for your past and continued support.

Model LT-2: Mosin 91 and 91/30 and all Enfields.

Model LT-98: German K98, Swedish 96 and 96/38 and Turkish 03/38. (Note: does NOT FIT Swedish 38 or Turk 38).

Model LT-CM: Czech VZ-24 and 98/22 and German GEW-98.

Model LT-48 (pre production orders only): Yugoslavian M-48, M48-A, B and BO.

Scott Duff says: UNITED STATES RIFLE MODEL OF 1917 provides both the beginning and advanced collector of the Model 1917 rifle with a depth of information heretofore unavailable.

The very existence of the Model 1917 rifle was almost accidental. When America entered World War One it had but 600,000 Model 1903 rifles with which to arm a growing military. Government armories were unable to supply the additional millions of rifles required. Because three American firms were already making rifles for Britain it was possible that an American version of the British Pattern 14 rifle could be produced quickly in significant numbers. It saved the day generations ago, but is little understood as a collectable military item or in historic significance. The purpose of this book is to inform the collector of details to be expected of an original, or "correct", Model 1917 rifle.

Such details include finish, dates of manufacture and serial number correlation, manufacturer and inspection markings, rebuild marks, and differences in parts between the three manufacturers: Winchester, Remington, and Eddystone. The accoutrements chapter includes information on bayonets and scabbards, slings, grenade launchers, cleaning equipment, and much more. Additionally, this book provides a historic background leading up to manufacture of the rifle. Total quantities of rifles made by each manufacturer are given, as are dates of first shipment to the Government and dates of last manufacture. Finally, the rifle's use after World War One by the U.S. and several foreign countries is addressed.

Price: \$23.95
